

Environmental policy

upKeeper Solutions AB actively works to improve the organization's environmental situation based on its economic and business prerequisites.

It is our strong belief that this makes the company more attractive both to employees, customers and partners. We aim to decrease our negative environmental impact and thereby contribute to a development focused on long term sustainability.

In our role as developer of IT-services and -products we strive to choose environmentally suitable products and aim to provide environmentally friendly alternatives within all our product categories. We also develop and sell solutions that decrease our customers' environmental impact.

Furthermore, we take active responsibility for creating public opinion and raising awareness about the importance of taking environmental issues seriously, and that everybody needs to contribute to global environmental work. We do this by highlighting our environmental message in our marketing material, take an active stand for environmentally friendly alternatives and communicating this to our customers, partners and any other stakeholders.

We continually communicate our environmental work to our employers, partners and customers.

We train and involve all our employees in our environmental work.

We conduct our operations in accordance with applicable environmental legislation and meet the environmental requirements set by the authorities.

Peter Johansson
CEO, upKeeper Solutions AB
